After a ruling by the U.S. Supreme Court on Wednesday, Texas abortion clinics previously closed under restrictions by a 2010 law have reopened.

The five-sentence ruling late Tuesday blocked parts of the law that required clinics to meet hospital-level operating standards. While this opened the abortion-offering facility in the city, the law still affects women's access to abortion in the state.

“Right now we have a smaller selection of drugs that kill cells but leave healthy cells intact,” Dr. Kevin Porter, professor of chemistry specializing in chemical syntheses, and Dr. Mary Smith Trawick, associate professor of chemistry and biochemistry, led the team developing and studying compounds that target cancer tissues. The three-year grant that funded this fall was from the Cancer Prevention and Research Institute of Texas.

“Still, it's pretty neat to see any innovation that led to stop proceeding because of that,” Trawick said. “Yesterday's Spokeswoman for Planned Parenthood of Greater Texas.

Tick-Tock

Professors should be mindful of keeping students overtime

During secondary education, most students become familiar with a bell system that starts a class and in college the burden falls on students to remind their instructors when it is time.

It seems rude sometimes, already zipping up a backpack five minutes before class should end, but without these small hints some professors would simply forget.

But why should students rush their professors to make their final point or discuss their final plans? Students are supposed to be in school to gain knowledge from these experienced and distinguished minds. Professors have earned a degree of respect that should not be diminished because of some technicality such as the end of a 30-minute learning window.

However, the problem is that a professor who is known to give long minutes details about the next week’s homework assignment three minutes after class is over disrupts the window of time their colleague shares with the student.

Students study on a campus where everyone is a two- or three-minute walking distance from their next class, those short distances could be overlooked. But no, I have a problem like Baylor, where the walk from Waco Hall to School of Engineering and Computer Science is about half a mile and about 11 minutes walk, according to the Google Maps, getting out of class on time is essential.

As a courtesy to the other teachers, professors, should be mindful of the effect they have on a student’s ability to arrive on time. But moreover, professors should have some empathy for the delicate balance that is being a college student.

Students spend a great deal of time planning their schedules before registration, calculating the time it takes to get to classes, the time it takes to travel between classes. Some also factor in the time it takes to leave class to make it to their place of employment.

For the most part, students don’t want to come across demanding, even if it is only in the balance but in an uncomfortable position for students, deciding why professor’s time is more valuable. Do you choose the one who is lecturing now or the one who is waiting for you in the next class?

Then, there are some professors who penalize students for being late. Students with professors such as these know how crucial it is to make it on time to class.

This doesn’t have to be a problem. Instructors should come to class with the intention of disseminating information in a time given window of time over the course of the semester.

What doesn’t get covered in this one class can be covered in the next class by the professor’s lecture. But what a student misses in one class because they were tardy cannot be easily corrected.

There are a lot of things college students are struggling to learn before entering the real world and time management is certainly one of them. And with some already experts in the fine art of procrastination, these minutes between classes can feel like just another opportunity to fall behind. Help students out. End class on time.
Fundraiser strives to end senior hunger

By Elly Spencer

In honor of World Food Day, the McLennan County Hunger Coalition is asking people to buy a lunch for a stranger today.

“This year our endeavor is to open our minds, which resulted in Lunch for Friends campaign, said Morales. "And then we decided to turn it from a religious event into a fundraising event for the whole community to take part in, which resulted in Lunch for Friends. ‘Lunch for Friends’ is our way to support what we feel is a major issue in our community, which is the McLennan County Hunger Coalition. We are asking people to buy lunch for a stranger today. Our proceeds will go half to Meals on Wheels to support the senior living program for home-bound seniors,” Morales said. "This year the fundraise, the McLennan County Hunger Coalition wanted to partner with a charity that is involved with feeding people. Woods said. "And then selected Meals on Wheels to be the recipient of part of the proceeds.”

Woods said that all the money will stay local and the money donated will go directly toward feeding people in need. Morales said that it has been a blessing for her to see the way they community has rallied its heart into giving in past events like this. "Fall is my favorite season because it really seems to change people attitudes towards giving," Morris said. “Even though we’ve supposed to have that attitude all year long, I feel that fall really has a tendency to change people’s hearts and we see that as an outcome from people who want to give back at the time of year.”

Grant increases campus diversity

By Elly Spencer

Baylor’s Campus Diversity Committee is once again supporting unity through differences with its $10,000 Diversity Enhancement Grant.

Individuals or groups can apply for the $1,000 per project, and the winning proposal will fund the best event ideas for diversity and inclusion on campus.

“The grant is designed to enhance any programs on campus that foster diversity, or that are already in existence,” said committee member Last English, Senior Study Abroad Program Coordinator.

Baylor’s effort is in line with the national push from the U.S. Department of Education. The department is investing nearly $66 million in grants to ensure that every college and university student receives an equal opportunity at a degree.

"Ensuring that every student has access to a high-quality education and historically underserved — minority college and university student receives an equal opportunity at a degree.

"McLennan County is a uniquely diverse and historically underserved — minority college and university student. "Baylor was one of only four campuses in Texas to receive this grant, "English said. "We’re looking for something that is open to all of the student community."

"This grant allows applicants to put on shows that they normally wouldn’t be able to put on," she said.

Moody-Ramirez is an advisor for the on-campus group Diverse Voices. She said the grant opens opportunities on campus. "The group allows applicants to put on shows that they normally wouldn’t be able to put on," she said.

BU chemists receive grant, research cancer-killing drug

Chemists at Baylor received a $90,000 grant to support research on drugs that kill cancer cells but leave healthy cells unaffected.

Dr. Kevin Pinney, professor of chemistry specializing in chemical synthesis, and Dr. Mary Smyrl Trawick, associate professor of chemistry and biochemistry, lead the team developing and studying compounds that target cancer tumors. The three-year grant that funded this full year from the Cancer Prevention and Research Institute of Texas.

Pinney said each compound contains two parts: a small protein molecule that kills all cells and an inactive molecule called prodrug that prevents the drug from acting against healthy cells.

Pinney said in theory, when the drug enters a tumor, where the fast-growing cells create a low-oxygen environment, the prodrug will change into an active form that will destroy the fast-growing cells. “We cultivate breast cancer cells under normal oxygen levels and under hypoxia, which means low-oxygen levels,” she said. “And we compare how many cells are killed by these agents.”

She said the group has received promising results with some of the compounds, but it has yet to conduct any of the following experiments. Transplant and collaborate, she said.

Cancer patients will be affected

A Baylor Cancer Patient Navigator, seen here with patient and protocol information, helps cancer patients navigate through their medical journey.

The Baylor Cancer Patient Navigator Program at Baylor University Medical Center at Texas Children’s has received a $490,000 grant from the American Cancer Society to expand the program to assist patients with hematologic malignancies.

Alfred L. Milstein, M.D., deputy chairman of the Department of Hematology-Oncology, received the American Cancer Society grant to expand the Cancer Patient Navigator Program to include patients with blood cancer.

The grant will fund the addition of four patient navigators to the current staff of four. The additional navigators will work with the referring physicians to support patients in hematologic malignancies throughout their treatment.

San Antonio — The Baylor Cancer Patient Navigator Program at Baylor University Medical Center at Texas Children’s has helped more than 1,300 cancer patients navigate through their medical journey.

The program, which was started at Texas Children’s in 2009, has been expanded to include all patients at the Baylor University Medical Center.

“We have been very fortunate to have received funding from the American Cancer Society to expand the Baylor Cancer Patient Navigator Program,” Milstein said.

“Now we can work with a much broader group of patients,” he said.

The additional navigators will work with the referring physicians to support patients in hematologic malignancies throughout their treatment.

“We have been very fortunate to have received funding from the American Cancer Society to expand the Baylor Cancer Patient Navigator Program,” Milstein said.

Prominent court rulings do not change anything for Waco because of the initial provision of this law, which requires providers to have admitting privileges, which went into effect last fall and is when Planned Parenthood in Waco stopped providing abortion.

Kehoe said the other portion of Planned Parenthood is still open, providing prenatal care, and will continue to fight for their right to offer abortion.

“It was a really important ruling and we are very glad that the court ruled the way they did,” she said. “We are hoping that thisujugurate law, the entire law, will be overturned completely, eventually, but for now we are still fighting for women’s access to safe, legal abortion across the state.”

The high court only suspended the restrictions for now pending the 5th U.S. Circuit Court of Appeals will weigh the law enjoined by the Legislature, as it has done consistently in the past.

“I wish the laws were enforced during the interim period,” she said. “The problem is, whatever legal issues are involved, attorneys go to work to try to get them set aside.”

Pisciotta said the main issue at hand is how dramatically different the laws are between the pro-life and pro-choice advocates.

“I won’t sugar-coat this,” he said. “There are those who think a woman’s right to have an abortion is part of a good Christian life, and some of them probably aren’t, but for now we are still fighting for women’s access to safe, legal abortion across the state.”

Women seeking abortions kept none but two at the Brook Street Women’s Clinic in Dallas, where a former staff of 17 people is down to single digit after the procedure was halted by the law before this month.

“None of them will come back, and some of them probably aren’t,” said Genny Breeze, the Dallas clinic director.

But for the state the high court ruled that Texas women would be看不见 abortion facilities, saying nearly nine in 10 women will still wait for at least 36 miles of a provider. But law opponents say that leaves nearly a millon women embarking on a journey longer than three hours to get an abortion.

Waco in New Waco now have to travel to Austin or Dallas for abortion services. The Associated Press contributed to this story.
Chick-fil-A, the newest addition to the rapidly expanding fast food Mecca nestled between Fifth Street and Seventh Street across the highway from Baylor, opened today. The first 100 customers received a free Chick-fil-A meal every week for a year.

Throughout the grand opening weekend, patrons are encouraged to bring children's books to the new location to be collected in a book house and donated to The Boys & Girls Club of Waco. The kitchen and restrooms use low flow faucets, which will decrease water use by 10 percent compared to other restaurants. Energy efficient light fixtures, HVAC, heat- roseon controls and windows will decrease energy use by 14 percent. Recycled materials were used in construction wherever possible.

With the opening of the restaurant comes the creation of about 70 new jobs. Brianna Barnett, director of training and human resources, said certified trainers from all over the country spend the first couple weeks with the new employees to ensure they are properly trained. "Some of these trainers have done over 40 grand openings," Barnett said.

Claudette Basden, Georgia native and Waco resident since 1986, said she is very excited about the opening, and is an avid supporter of the company. "I've known teenagers who went to church trips, that their parents from California. In contact with some regular cus-

Saturday night, No. 4 Baylor football leaves the friendly confines of home and takes on the West Virginia Mountaineers. The Bears snatched a dramatic fourth-quarter comeback win against TCU last Saturday to keep their unblemished record alive. West Virginia also beat up on Baylor in the Big 12 opener, setting up a game with game-winning field goal against Texas Tech in Lubbock last Sat.

Baylor senior quarterback Bryce Petty and WVU senior quarterback Clint Trickett, statistically, are two of the nation's best passer and will square off in Morgantown, W. Va. Petty and Trickett had two of the most efficient passing efforts in the country.

"Trickett is great," Baylor head coach Art Briles said. "He's a kid who's had some around the game his whole life. He's grown up and is a lot more comfortable in his system as he puts in their schemes, " Briles said. (Kevin) White is leading on the team with 61 catches for 717 yards and 10 touchdowns. He ranks No. 3 in the nation with 888 receiving yards. Alford is a guy that provides passers with a consistent basis. Many WVU receivers are seventh in the league with eight touchdowns this season.

"Dana (Holgorsen) is always waiting to have good people to put in their schemes," Briles said. "We've got White leading the nation in catching yards. They mix it up well. They've got a consistent group of receivers, and they've been helpful to you.

The Mountaineers' passing offense is undoubtedly a threat. It is, and only Baylor and Texas Tech can say the same. West Virginia quarterback Skyler Brown leads the Big 12 with 14.8 yards per carry. Petty leads the Big 12 with 104.5 yards per attempt. Petty is expecting a challenge from Spring game that started slow for Lin-wood, including a lost fumble in the first half. Linwood said he channeled his frustration after that fumble to run harder and protect the ball better for the rest of the game.

Another great crowd is expected for this huge home game for West Virginia against TCU in the Big 12. Milam Parkway Stadium packs 60,000 fans on a consistent basis. Many WVU players are seventh in the league with eight touchdowns this season.

The Mountaineers have taken Nos. 1, Alabama and No. 4 Oklahoma down to the wire this season, but have yet to get over the hump. West Virginia defense is experiencing a learning curve in its first year under defensive coordinator Tony Gibson. The Mountaineers rank near the bottom of the conference in total defense, but have been able to come up with steps by key substitutions two times this season. Gibson and Holgorsen have both stressed finding a way to win in these close games rather than playing down the opponent altogether.

After a 4-6 campaign in 2013, there was some uncertainty about where the Mountaineers would be heading into this season. Holgorsen has successfully found a way to come up with wins in close games this year and has relatively few games this season. The Mountaineers have taken Nos. 1, Alabama and No. 4 Oklahoma down to the wire this season, but have yet to get over the hump.
