Campus rooming set to change with new software

By Rebecca Flannery
Staff Writer

Campus Living and Learning is working to improve and implement changes to its rooming system.

"As we go through this, we anticipate the roommate matching (system) to dramatically increase from what we have now," said Ryan Cohenour, associate director for housing administration. Cohenour predicts the new system will improve these numbers, which he said are often collocated before students go to know their roommates. Roommates are placed together based upon their room type preference and residential hall preference. Majors are not taken into account outside of specialized residential communities.

"Students are placed on their own matching suite where they want that full preference and residential hall preference. Majors are not taken into account outside of specialized residential communities.

"...perhaps in color and put them in front of looking at any other data. Students are able to look at their roommate only if the students mutually choose each other. Co-living is matching to students who don't know each other already."

"There's no way to openly search for another person that may be from a thousand miles away but may actually be the best roommate for you," Cohenour said. "We wanted to have a roommate matching suite where they won't go to Facebook, they won't go to Facebook, that we were able to offer all for our students internally."

Weber's webmaster Amy Davis said she would sign up for a roommate matching program to have more compatible roommates.

"I live in North Village and have five roommates, and I can see how someone in my situation would love it."

AP Science Writer

WASHINGTON — A handful of small earthquakes west of Fort Worth in Texas have been linked to the fracking process, even though that may be a small price to pay for the jobs it creates. Fracking, even though that may be a small price to pay for the jobs it creates.

A study published Tuesday in the journal Nature Communications said it is “very likely” that most of the earthquakes happened; company data from the USGS. Removing the saltwater from the wells and it could be tracked into a plant on an employees’ shoes, introduced through animal feed or possibly employee not washing their hands. It can grow in environment or in air, it can survive forever if it’s not cleaned up.

The scientists determined this based on the timing and location of the quakes, and company data from the U.S. Geological Survey. It’s an area that had recorded 12 earthquakes since 2013, with 11 of those occurring since May. These have been inactive for hundreds of years, at least, and there haven’t been any large earthquakes in the past 25 years.

California water districts forced to review rates

By Bruce Alpert  
AP West News Writer

LOS ANGELES — An appeals court decision striking down a provision that water rates that are increased to encouraging conservation and water agencies returning excess water to the state and charging farmers and ranchers for the privilege. The court threw out an argument that the provision was vague and gave the state too much discretion.

The decision by the state’s highest court on Tuesday is a major blow to cities that are trying to encourage conservation. The court ruled that the provision is unconstitutional and that the state cannot authorize the return of water to the state.

The decision by the California Supreme Court is a major setback for cities that are trying to encourage conservation. The court ruled that the provision is unconstitutional and that the state cannot authorize the return of water to the state.

‘Cinderella’ brings new facets to familiar fairytales faces

By Rae Jefferson

A&E Editor

The film honors a longtime Disney favorite, adding few new characters and plot developments, but all in all, it remains a fresh salute to a fantastical as in the animated version of “Cinderella,” their presence was an asset. The mice and other supporting characters did not sing and were not as impecabble, nailing the fairytale atmosphere. The film brims with color and pattern, which I’m sure will please kids and adults alike. Although the film’s writer, Chris Weitz, did an unexpectedly good job of making other characters more dynamic, Cinderella’s permissive actions as an indication of her sweet nature or the result of poor character development.

Alternatively, the film’s writer, Chris Weitz, did an unexpectedly good job of making other characters more dynamic. Perhaps I’m just spoiled by the Hollywood trend of reinventing classic stories and characters. Nonetheless, I find between explaining Cinderella’s permissive actions as an indication of her sweet nature or the result of poor character development.

My favorite character in the film was the stepmother. Although she is traditionally a despicable person, I almost pitied her. She was wounded early on in the movie. Cinderella despite her inability to advance the kingdom. She was wounded early on in the movie.

Hence, the stepmother, who so obviously continued to love his first wife, alternatively, the film’s writer, Chris Weitz, did an unexpectedly good job of making other characters more dynamic. Perhaps I’m just spoiled by the Hollywood trend of reinventing classic stories and characters. Nonetheless, I find between explaining Cinderella’s permissive actions as an indication of her sweet nature or the result of poor character development.

**Baseball outslasts Lamar**

By LeAnn Hinesworth

A host of young and inexperienced quarterbacks are helping to carry the ball and gaining some momentum after being named the Big 12 Player of the Week after helping Baylor clinch a Big 12 title. For his effort, Junior tennis player Julian Lenz was named Big 12 Player of the Week for the strength and boot camp of the Bears.

Lenz, who was named Big 12 Player of the Week for the strength and boot camp of the Bears, said he had been working out a lot during spring ball. While Swoopes was pushed by redshirt freshman Jerrod Heard during spring ball, throwing for just 573 yards on 25 passes.

The best time to work for it, they can see some good positions. After each workout, I stayed around for 10 minutes to catch my breath and try to stop sweating, before leaving. I just finished an intense one-hour work session, and although I was completely exhausted, no amount of rest can take away the amount of work put into the program. D1Sports is the real deal, and it has to say in Waco.

**Most QB jobs remain undecided in Big 12**
